### **Manchester University chooses Brookhaven instruments for research.**

The Department of Polymer Chemistry at Manchester University is using a Brookhaven light scattering system based around the BI-200SM Goniometer and BI-9000AT Correlator for its research work on polymer characterisation and particle size analysis.

The Brookhaven system was bought four years ago to replace existing instruments. Professor Colin Price, Department of Chemistry, said: "We are very pleased with the instruments and the service we receive from Brookhaven."

With a broad range of research interests including colloidal and surface properties of surfactants, functionalised polymers and block and graft copolymers, using the Brookhaven systems has helped Professor Price to extend the work that both he and his colleagues are doing. He said: "It is important to me that we receive good service when it is required, friendly informed advice when needed and that the instrument meets its specification. We get all of these with Brookhaven."
